Glass Microfiber Binder Free

Home | Filter Papers | Glass Microfiber Filters | Glass Microfiber Binder Free

Grade GF/A: 1.6 µm

Offers fine particle retention and high flow rate, as well as good loading capacity. Used for high-efficiency general purpose laboratory filtration, including water pollution monitoring of effluents, for filtration of water, algae and bacteria cultures, foodstuff analyses, protein filtration and radioimmunoassay of weak ß emitters. Recommended for gravimetric determination of airborne particulates, stack sampling and absorption methods of air pollution monitoring.

This filter is also available in the <u>FilterCup</u> and <u>Disposable Filter Funnel</u> formats.

Printable Version

Grade GF/B: 1.0 µm

Three times thicker than GF/A with higher wet strength and significantly increased loading capacity. Combines fine particle retention with good flow rate. Particularly useful where liquid clarification or solids quantification is required for heavily loaded fine particulate suspensions. Can be used as a finely retentive membrane prefilter. Used in LSC techniques where high loading capacity is required.

Grade GF/C: 1.2 µm

Combines fine particle retention with good flow rate. The standard filter in many parts of the world for the collection of suspended solids in potable water and natural and industrial wastes.

Fast and efficient clarification of aqueous liquids containing low to medium levels of fine particulates. Widely used for cell harvesting, liquid scintillation counting and binding assays where more loading capacity is required.

This filter is available in the **FilterCup** format.

Grade GF/D: 2.7 µm

Considerably faster in flow rate and overall filtration speed than cellulose filter papers of similar particle retention. The filter is thick and consequently exhibits a high loading capacity. Designed as a membrane prefilter and available in sizes to fit most holders. GF/D will provide good protection for finely retentive membranes. Can be used in combination with GF/B to provide very efficient graded prefilter protection for membranes.

Grade GF/F: 0.7 µm

This high-efficiency filter will retain fine particles down to 0.7 µm. Unlike membrane filters with a comparable retention value, it has a very rapid flow rate and an extremely high loading capacity.

Because of the tight specification of 0.6 μm - 0.8 μm particle retention and pure borosilicate glass structure, GF/F is the material upon which the EPA Method TCLP 1311 for Toxicity Characteristic Leaching Procedure was developed. It remains today the filter of choice.

Recommended for DNA binding and purification. Very effective in filtering finely precipitated

proteins, GF/F can be used in conjunction with GF/D as a prefilter for the successful clarification of extremely 'difficult' biochemical solutions and fluids, and nucleic acids.

This filter is available in the FilterCup and Disposable Filter Funnel format.

Grade 934-AH: 1.5 µm

The fine particle retention of this popular grade is superior for its high retention efficiency at high flow rates and its high loading capacity. This is a smooth surface, high-retention borosilicate glass microfiber filter which withstands temperatures over 500° C. Used for determining total suspended solids in water, removal of turbidity and filtration of bacterial cultures. Grade 934-AH is used for a wide range of laboratory applications. It is recommended for water pollution monitoring, cell harvesting, liquid scintillation counting and air pollution monitoring.

Quartz Filter - Grade QM-A: 2.2 µm

High-purity quartz (SiO2) microfiber filters are used for air sampling in acidic gases, stacks, flues and aerosols, particularly at high temperatures up to 500° C and in PM-10 testing. Because of the low level of alkaline earth metals, 'artifact' products of sulfates and nitrates (from SO2 and NO2) are virtually eliminated. QM-A, sequentially numbered according to EPA standards, is suitable for most applications. Please refer to the <u>Air Sampling Filter/Quartz Filters</u> section for ordering information.

Grade EPM 2000: 2.0 µm

EPM 2000 has been developed especially for use in high volume air sampling equipment that collects atmospheric particulates and aerosols. It is manufactured from 100% pure borosilicate glass of special purity enabling detailed chemical analysis of trace pollutants to take place with the minimum of interference or background. See <u>Air Sampling Filter/Quartz Filters section</u> for ordering details.

Grade GMF 150: 1 µm or 2 µm

The Whatman GMF 150 is a unique multilayer glass microfiber filter with a coarse top layer (10 μ m) and meshed with a finer layer of 1 μ m or 2 μ m. Manufactured from 100% borosilicate glass microfiber, the filter is binder free. It is the ideal prefilter for higher particulate loading capacity with faster flow rates. See **GMF 150** section for ordering information.

Typical Properties - Binder-Free Glass Microfiber Grades

Grade	Description	Particle Retention in Liquid (µm)	Filtration Speed Herzberg(s)	Air Flow (s/100 mL/in²)	Typical Thickness (µm)	Basis Weight (g/m²)
GF/A	Fast, High Loading	1.6*	62	4.3	260	53
GF/B	Medium to Fast, Very High Loading	1.0*	195	12	675	143
GF/C	Medium to Fast, High Loading	1.2*	100	6.7	260	53
GF/D	Fast, Very High Loading	2.7	41	2.2	675	121
